

Jim Fawcett
CSE775 - Distributed Objects
Spring 2011

CONTENT REVIEW

COURSE TOPICS

- ✘ Win32 Programming
- ✘ COM
- ✘ .Net Controls
- ✘ WPF
- ✘ WCF
- ✘ Final Projects

WIN32 PROGRAMMING

- ✘ Kernel objects
 - + Handles
 - + Threads, synchronizers, windows, MappedFiles
- ✘ API
- ✘ Windows programming
 - + STA model starts here
 - + Interprocess communication with SendMessage and PostMessage
- ✘ Take-away:
 - + Effective, tedious, can easily build upon this platform, especially with C++

COM MODEL

- ✘ Effective as component model
- ✘ Weak object model
- ✘ Easy interprocess communication
- ✘ Basis for Office, IE, Visual Studio, Media Player
- ✘ Effective interop with .Net types
 - + Even better with the introduction of dynamic type
- ✘ Complex, changes to recipe often break builds
- ✘ Take-away:
 - + Effective, limited, sometimes excruciating for developers, ubiquitous in Windows

.NET CONTROLS

- ✘ Wrappers around windows and ActiveX controls
 - + Controls supplied with Windows, Visual Studio, IE
 - + Component
 - ✘ Toolbox and design time support
 - ✘ Not visible on form
 - + UserControl – composite control
 - + Controls – user implements OnPaint
 - + Derived Controls – add to existing functionality
- ✘ Take-away
 - + By far the easiest Microsoft technology to use
 - + Broad support for windows platform

WPF CONTROLS

- ✘ Eliminated Component model in favor of rendering parse tree
 - + Uses templates
 - ✘ ControlTemplate, DataTemplate
 - ✘ Vector Graphics
 - ✘ DirectX core processing
 - + Silverlight also adopts this model
- ✘ Take-away
 - + Extraordinarily effective support for GUIs
 - + Coverage is superb: forms, navigation, layout, drawing, animation

WCF

- ✘ Supports IPC, Network Programming, Web Programming under one common model
- ✘ Very effective plugin architecture
 - + Bindings, policies
- ✘ Behaviors define settings, error handling
- ✘ Declarative and Programmatic definition
- ✘ Lots of Framework support for building both services and clients.
- ✘ Take-away
 - + Extremely flexible, broad scope: ipc, networks, web
 - + Lots of support for different needs: activation, security, ...

FINAL PROJECTS

- ✘ Chance to explore things not discussed in class
- ✘ Projects broadened definition of object distribution
 - + From GUI containers and networked machines
 - + To Cloud, Mobil, Web, REST, cross platform
 - + Look at new paradigms
- ✘ Take-away
 - + Nice to have student presentations
 - + Too early to tell how well this will work
 - + Would like to have your feedback
