

## Help for CSE687 – OOD Project #1

- Peek at Project #1 Statement
  - Tasks
    - accept path and patterns from command line
    - find files to process - all files on path that satisfy patterns, using DirectoryExplorer-Naive
    - use Regex to select files to process
    - process each selection
      - translate markup: `< ==> &lt;; > ==> &gt;`
      - insert into `<pre></pre>` element
      - insert that into webpage template
        - show Project #1 helper
    - Display each processed file, using Process
- Peek at Project1HelpS2019
  - Peek at OodProject1Helper - shows example results of your Project #1 implementation
  - Demo DirectoryNavigator - Illustrates how to search a directory tree for files
  - Demo Process - Shows how to run child processes (show html files in FF)
